

KEGEL LANDMARK PATTERNS

KEGELLANDMARK PATTERNS

CHALLENGE SERIES

TOWER OF PISA 3541

Also known as the Leaning Tower of Pisa, this pattern is asymmetric in design with a shift to the inside on the left, or if looking at it from another perspective, a shift to the outside on the right. At 41' in length, this oil pattern retains much of its shape throughout the entire length of the pattern, just like the Tower of Pisa does.

Latitude Ratio Coordinates

22′ 3.5 to 1 39′ 1.9 to 1

Longitude Ratio Coordinates

Outside Taper 7.2 to 1 Inside Taper 9.6 to 1

Pattern Distance

41 Feet

Pattern Volume

Forward 14.38 mL Reverse 10.60 mL Total 24.98 ml

KEGELLANDMARK PATTERNS

CHALLENGE SERIES

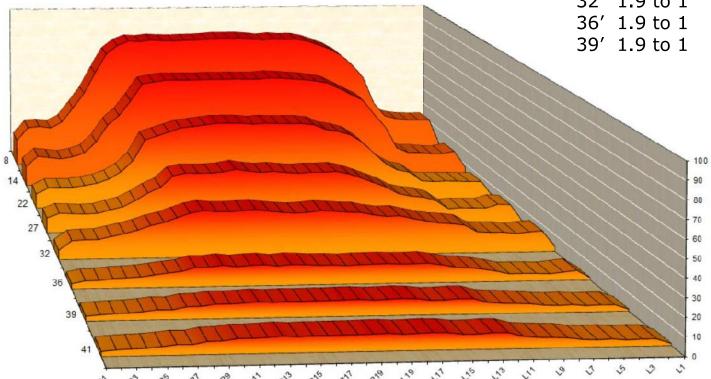

TOWER OF PISA 3541

Latitude Ratio Coordinates

14' 3.3 to 1 22' 3.5 to 1 27' 2.7 to 1 32' 1.9 to 1 36' 1.9 to 1 39' 1.9 to 1

8' 2.5 to 1

The 2D Chart above was generated by the Lane Reader showing select tapes and ratios at key distances throughout the oil pattern. USBC Sport Bowling ratios are calculated at 22' and 2' before the end of the oil pattern. **KEGEL KODE Ratios** are determined by the highest Sport Bowling ratio number for that oil pattern.

KEGEL TIP - Generally, the lower the ratios towards the end of the oil pattern, the less guidance of the bowling ball and therefore, the more difficult the oil pattern may play. The higher the ratios are towards the end of the oil pattern, the easier it may play.

KEGELLANDMARK PATTERNS

CHALLENGE SERIES

This page shows the **KOSI FLEX LANE MACHINE** program sheet.

The **HEADER** shows the oil pattern distance, the reverse brush drop distance, the amount of lane conditioner applied to the lane, the oil per board setting, and the conditioner type in each tank.

Below that is the **FLEX LANE MACHINE PROGRAM** settings
which shows the load structure
and number of loads, the oil
pump setting if using the multi
mic stream feature, the speed
of the lane machine, the buffer
speed, and the tank choice per
load screen.

The **OVERHEAD CHART** on the far right shows where the conditioner is applied on both the forward and reverse pass. The gradient area is a calculation of how the conditioner might bleed off the buffer brush.

The **COMPOSITE GRAPH** at the bottom shows the total amount of conditioner applied to every board along with that volume ratio in different zones.

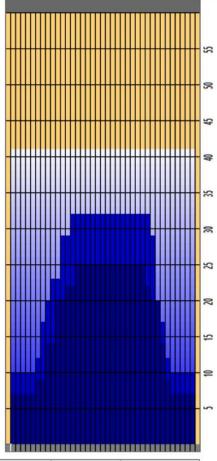

A good way to think about the composite graph is to envision all the conditioner on the lane being pushed back to the foul line. Once all the conditioner is stacked up, this is what it would look like.

KEGEL TIP - Once the amount of conditioner on the corners (outsides) reaches 300 microliters, an oil pattern begins to become "competitive". Less than that amount the ball might see friction and it could play on the easy side.
